The Impact of Peer-Led Support on International Medical Graduates Training Experience in the Internal Medicine Training Programme.

Allotey, J1; The IMG Working Group2

1 Bradford Teaching Hospital Foundation Trust, 2 School of Medicine, Health Education England, Yorkshire and the Humber Region.

Introduction: International Medical Graduates (IMGs) are non-UK trained doctors, and they make up to 26% UK medical workforce. As IMGs enter post-graduate medical programmes in the UK, there are foreseeable challenges that might affect their professional and personal lives.

Methods: This study was a Quality Improvement Project. IMGs in the IMT programme for both 2020 (pilot group) and 2021 cohorts, in Yorkshire and Humber region were surveyed. A questionnaire assessing professional and personal experiences was administered to both groups. The 2021 cohort was resurveyed after the intervention period.

Results: The respondents showed low levels of confidence approaching their educational supervisors with training concerns. Educational supervisors’ training, to achieve a better understanding of the peculiar challenges of IMGs, can be a target to improve IMG support and ultimately training outcomes.

Aim: Assess the impact of a peer-led induction and ongoing support on the professional and personal lives of IMGs in Internal Medicine Training (IMT) Yorkshire and the Humber region.

Casey: Short text on page.

Table 1: Trainee Responses to Professional and Personal Concerns

<table>
<thead>
<tr>
<th>Training Concerns</th>
<th>2020 (Response rate %)</th>

</tr>
<tr>
<td>Travel/Living concerns</td>
<td>7%</td>
<td>17%</td>
<td>17%</td>
</tr>
<tr>
<td>Overall struggling in the UK</td>
<td>33%</td>
<td>25%</td>
<td>none</td>
</tr>
</tbody>
</table>

Discussion: Specialty training in general is a new and challenging experience, more so for IMGs relatively new to the UK health system. Respondents found the interventions put in place to be beneficial to varying degrees.

A limitation of the project was the relatively low response rates after the intervention period, which could be attributed to survey fatigue among the trainees.

There was an improvement in almost all areas assessed during the survey after the intervention period. Differential attainment continues to hinder career progression among IMGs, and peer-led interventions may be beneficial in offering much needed support to IMG trainees.

The IMG Working Group YH-HEE SoM:

Project supervisor: Dr Anna Garcia
Head of School: Dr Peter Hammond
Programme Support coordinator for Medicine: Zoe Robb
TPDs and Deputy TPDs: Dr Elizabeth Uchegbu, Dr Aila Munir, Dr Ali Mansoor, Dr Srijam Iyer, Dr Rekha Ramanath.
IMTs: Dr Umbreen Nadeem, Dr Rui Baptista Goncalves
